CLARIFICATION Drink series:
It Matters What's on the Inside.

MODEL	Key Benefit	Primary Technolgy	Addresses Contaminants
AQWaterBar	2 waters in 1 system New taste, choice, quality	Adsorption/Filtration/Block Reverse Osmosis/Sweet Coco Polish	Chlorine, Taste, Odor, More See Stages Q1 - Q4
Details:	Filtered Water Option Balanced rejection ratio (RO)	Dual Water Technology Saves Water Drinking, cooking, ice cubes, espresso	Over Traditional Reverse Osmosis Only Pasta pot, pets, vegetable rinsing
AQDrinkRO	Advanced Technology RO Ultimate 75gpd RO Production	Adsorption/Filtration/Block/RO Sweet Post RO Coco Water Polish	Chlorine, Taste, Odor, More See Stages Q1 - Q4
Details:	Highest Capacity Plus Flow Rates	Auto Shut Off Technology	Streamlined Compact System Operation
AQDrinkMCT	Micron Carbon Block Technology	Adsorption/Filtration/Carbon Block	Chlorine, Taste, Odor, Chemicals See Stage Q2
Details:	Single Stage Block Design	Micron Carbon Block Protection	Excellent Chemical Reduction

Stage	Media	Details	Function	Contaminant
Q-1	Pre-filtration	Polypropylene	Down-Line Protection	Dirt, Sand, Sediment
Q-2	Carbon Block	Micron Block Technology	Chlorine, Adsorption	Lead, Cysts, Chemicals
Q-3	RO Membrane	TFC 75GPD	Total Dissolved Solids	Inorganics, Metals, Chemicals
Q-4	GAC Polishing	Granular Activated Carbon	Sweet Post RO Polishing	Taste, Polishing

CLAIMS: Micron Carbon Block Technology__Sediment, Taste & Odor, Chlorine, Lead, Cysts, Mercury, Asbestos, Atrazine, Lindane, Turbidity, Particulate 1. NSF/ANSI 42 & 53.

CLAIMS: RO-75 Technology__Dissolved Minerals, Arsenic, Barium, Cadmium Hexavalent & Trivalent, Chromium, Copper, Cysts, Fluoride, Radium, Selenium. Nitrite & Nitrate (Optional) NSF/ANSI 42 & 58.

Do not use drinking water systems to filter water that is unpotable. Drinking water filters, membranes, media, housings and components manufactured in accordance with the highest principals and total quality control (TQC) standards. Multi media physical filters address the broadest range of suspended water contaminants. Physical filtration used to address chlorine, taste, odor, bacteria, pathogens, particulate, volatile organic compounds (VOCs), cysts, lead, chemicals. Physical filters trap and hold (adsorb) contaminants on their media surface until the filter is changed. Reverse Osmosis process used to address total dissolved salts (TDS), minerals, heavy metals, flouoride, chemicals, inorganics. Reference "Drinking Water Treatment Methodology" for 3rd party water treatment data. Know your feed water. Well water should be 3rd party tested and treated with adequate on-site disinfection pre- ultraviolet light (UV) sterilization. All drink systems require proper installation, care, routine maintenance (flushing, tank sterilization, filter/membrane changes) and water testing to assure system is functioning correctly.

Love your water, Love yourself™
